THE BIG ELEPHANT®
HAS ARRIVED

NEW

The new BIG ELEPHANT® electronic power mixer series from BERG is the result of many years of experience in the mixer field. This model series is based on a radically new technical concept whose innovative elements are also evident in its shape. The further development of the operating elements built into the handle is one of its many new functions. Because the model series is optimally tailored to users' needs, the right electronic power mixer satisfies all demands.

NEW DESIGN – FUNCTIONALITY FOR PROFESSIONALS

The new design of the BIG ELEPHANT® electronic power mixer series impresses because of its functionality. The model series was developed for professional use in the building trade and offers quality for the toughest requirements: Special emphasis was placed on toughness, ergonomics and handling in the design work. The result is impressive.

MODEL SERIES – THE RIGHT MODEL FOR EVERYONE

Since the models vary according to performance, every user can select the best machine for them. Hence, a perfect diversity of products is created for the entire range of applications.

The model series is available in the following rating grades:

- BBE 900 (900 W / 1 gear)
- BBE 1100 (1100 W / 1 gear)
- BBE 1200 (1200 W / 2 gears)
- BBE 1500 (1500 W / 2 gears)
- BBE 1800 (1800 W / 2 gears)

The rating has a decisive influence on the maximum possible mixing volume. The material mixture generally used should always be taken into account as well. All models are available in 230 V and 110 V versions with different plug versions (i.e. US- / UK or CH- designs, for example).

NEW FUNCTIONALITY / ELECTRONIC SPEED CONTROL – GIVING POWER WITH CRUISE CONTROL

The switch offers many new functions for operating the electronic power mixer. The outstanding feature of the new electronic speed control is the innovative way of regulation. Also, the electronic system that controls the speed is continuously adjustable with the control wheel. In addition, the switch features a giving power function that ensures a comfortable start of the mixing process and prevents spurting. At "full speed", the electronic system sets itself to the adjusted speed range.

AIR FLOW – PROTECTED MOTOR COOLING

Water or impurities that get into the motor can cause serious damage, yet this is precisely what the new BBE air intake prevents. It protects the motor on the construction site while optimally cooling it at the same time.

CARBON BRUSHES – CHANGEABLE FROM THE OUTSIDE

The carbon brushes can be changed easily and quickly from the outside of the machine, without a required opening. Saving time and money.

GEAR AND MOTOR FEATURES – SPECIAL GEARBOX, TOUGH AND DURABLE

The hardened gear wheels have been especially conceived for use in electronic power mixers. Thus, the most sensitive part of the electronic power mixer is strengthened for continuous use.

GEAR SELECTION SWITCH – SWITCH A GEAR UP

The speeds of the 1-gear models are optimal for certain material mixtures, whereas the 2-gear models are ideally suitable for every material mixture. The rotary switch design of the gear selection is extremely comfortable to use.

INTEGRATED OPERATIONAL CONTROL ELEMENTS – EVERYTHING ALWAYS HANDY

All the important operational control elements have been integrated into the handle so the user can safely control the electronic power mixer with both hands on the handle. The non-slip material enhances the safe work aspect. In principle, all models – regardless of motor performance – are equipped with the advantageous functions of the new handle.

ALUMINIUM HANDLE – PROTECTION FOR THE MACHINE

The aluminium handle optimally protects the machine against damage. Furthermore, the handle design is very tough and capable of withstanding fracture damage.

BERG MIXING PADDLES – ALWAYS THE RIGHT CHOICE

The BERG mixing paddle range offers the ideal solution for every kind of mixing material. Different available paddle lengths allow an ergonomic operating.

M14 TOOL FITTING – ALWAYS READY FOR USE

The best solution for electronic power mixers is the M14 tool fitting because even with dried-up material mixture such as mortar or adhesive, the mixing paddle can be detached and replaced without a problem. In addition, this fitting ensures an exactly centered radial run-out.

LARGE SWITCH – EASY OPERATION ALWAYS ASSURED

The built-in switch with its large operating area is perfectly suitable for comfortable working, even in longer mixing processes. It is also possible to operate the electronic power mixer whilst wearing working gloves. The switch also features a locking function.
